A 24-year-old female presents to establish care in your clinic. She has no problems. She has had 2 lifetime sexual partners, and is in a monogamous relationship. She is also healthy. She has no history of genital ulcers or symptoms. She asks about screening for HSV-1 infection.

Which of the following is recommended for screening for HSV-1 infection?

- Routine screening with type-specific serologies for all patients as part of medical care.
- Routine screening with plasma HSV PCR for all patients age 18 and older as part of medical care.

National **STD** Curriculum

www.std.uw.edu

The National STD Curriculum addresses the epidemiology, pathogenesis, clinical manifestations, diagnosis, management, and prevention of STDs and features:

- Seven Self-Study Modules
- 14+ Question Bank topics with 150+ interactive board-review style questions
- Modular learning in any order with individual progress tracker
- Group registration and tracking for staff, students, and health care organizations

Funded by a grant from the U.S. Centers for Disease Control and Prevention (CDC) and developed by the University of Washington STD Prevention Training Center and the University of Washington.

UNIVERSITY of
WASHINGTON

Free CME and CNE credits are offered throughout the site.
